

Welcome to the BrainHQ Cognitive Check-In!

Quickstart Guide for Clients

A Cognitive Check-In is a brief, science-based way to help you check in on your brain health and monitor changes over time. Just as regular blood pressure checks help track heart health, regular Cognitive Check-Ins can help support brain health.

What to Expect

- Your Cognitive Check-In may include one (or more) tasks.
- Each task measures a different aspect of brain health.
- Tasks adapt to you. Everyone gets some answers right and some wrong.
- Each task takes around 3 minutes. Your full Cognitive Check-In may take longer.

Before You Begin

- BrainHQ login (email + password)
- Computer, tablet, or phone
- Comfortable, quiet place with minimal distraction

Step 1: Log In

Use the email and password provided by your administrator

Step 2: Start Your Cognitive Check-In

Click the colored wheel

Step 3: Review Instructions

Read instructions and complete practice trials

Step 4: Begin

Press START when ready

Step 5: Finish

Individual Check-Ins end automatically when enough data is collected

Step 6: Continue

Complete remaining Check-Ins

Step 7: Done

Click Exit to complete your Cognitive Check-In

After you are done, most likely on a different day, you'll meet with your administrator, who will explain the check-in results and work with you to develop a brain health plan that's right for you.
